PROFESSIONAL PROFILE

Versatile IT professional combining full-stack software development expertise with deep IT support and operations experience. Proficient in building high-performance web and mobile applications using modern JavaScript frameworks, Python, and PHP, while simultaneously maintaining a strong foundation in end-user support, systems administration, network infrastructure, and quality assurance. Proven ability to diagnose complex technical issues — from application-layer bugs to hardware and network faults — and deliver permanent, well-documented resolutions. Comfortable operating across the entire technology stack: architecting scalable web solutions, imaging and configuring workstations, supporting LAN/WAN infrastructure, and implementing monitoring and SRE practices to maximise system reliability and uptime. Adept at translating technical concepts for non-technical stakeholders and thriving in both agile development teams and fast-paced IT support environments.

CORE COMPETENCIES

SOFTWARE DEVELOPMENT	IT SUPPORT & OPERATIONS
Languages: JavaScript, PHP, Java, HTML5/CSS3, Python	End-User Support & Helpdesk (L1/L2)
Frameworks: React.js, Vue.js, Nest.js, Bootstrap, Spring Boot	Systems Administration (Windows & Linux)
Databases: MySQL, PostgreSQL, MongoDB, MS SQL	Network Diagnostics & LAN/WAN Infrastructure
Mobile: Android (Java/Kotlin), PWA	Workstation Imaging & OS Deployment
APIs: REST, third-party integrations	Hardware Troubleshooting & Repair
DevOps: Git/GitHub, Bitbucket, CI/CD pipelines	Quality Assurance & SRE / Uptime Monitoring
UI/UX: Figma, Adobe XD, responsive design	IT Documentation & Knowledge Base
CMS: WordPress; Scripting for automation	Incident Triage, Trend Tracking & Escalation

PROFESSIONAL EXPERIENCE

Freelance IT Support & Full-Stack Developer | Self-Employed — Hybrid

Dec 2025 – Present

- Delivered end-to-end technical support for local SMEs: requirements gathering, hardware setup and repair, software installation and configuration, OS imaging, user onboarding and training, and ongoing troubleshooting.
- Built custom web solutions for clients using JavaScript (ReactJS, VueJS) and PHP frameworks, managing full project lifecycles from discovery and wireframing (Figma) through deployment and post-launch support.
- Maintained local area networks, diagnosed connectivity issues, and administered basic server and DNS configurations to ensure reliable operations for client businesses.
- Produced clear user-facing and internal documentation for IT procedures, issue-resolution steps, and system maintenance guides, reducing repeat incidents and enabling client self-service.

Full-Stack Developer & IT Systems Lead — Intern | Kahustle — Nairobi, Kenya

May 2025 – Aug 2025

- Served as first-line IT contact for internal staff, triaging and resolving hardware, software, and connectivity incidents in a production environment; maintained a zero-backlog SLA for routine helpdesk requests.
- Collaborated within a cross-functional agile team on end-to-end application development — front-end (ReactJS) through to server-side API integration — ensuring continuous alignment with business requirements.
- Diagnosed and permanently resolved critical application bugs and system configuration issues, documenting root causes and resolutions to seed a shared knowledge base and prevent recurrence.
- Optimised server-side logic and SQL database queries, measurably reducing page load times and enhancing application stability and end-user experience across production systems.
- Implemented basic monitoring and alerting to proactively surface emerging infrastructure issues, supporting SRE-aligned uptime and incident-response practices.

- Developed custom commercial web applications with integrated third-party APIs, collaborating with architects and senior developers to define system architecture, deployment strategies, and maintenance schedules.
- Implemented SEO best practices and front-end performance optimisations (lazy loading, code splitting), contributing to a 30% increase in website traffic and improved brand visibility for clients.
- Conducted functional and regression testing on delivered features, identifying defects prior to production releases and documenting test cases for the QA knowledge base.
- Supported post-deployment activities including environment configuration, log review, and basic network connectivity checks to ensure stable, reliable service delivery.

- Built and maintained the company's IT infrastructure from the ground up — covering workstation imaging, OS deployment (Windows/Linux), networking (LAN/WAN setup), and communications systems — establishing a scalable, resilient foundation.
- Architected the company's web presence using modern JavaScript frameworks, creating a performant, mobile-responsive platform that served as the digital foundation for future growth.
- Integrated monitoring and analytics tooling (uptime checks, server metrics, user analytics) to track system effectiveness and proactively escalate emerging issues, enabling data-driven IT decision-making.
- Supported security and business continuity activities — patch management, backup verification, access control reviews — ensuring compliance with operational standards and minimising downtime risk.
- Produced comprehensive IT procedure documentation, troubleshooting guides, and system maintenance manuals for use by both technical and non-technical staff.

PROJECTS

Premier Matchmaking – Romantic Platform · ReactJS · CSS · JavaScript · REST API

- Designed and implemented a responsive matchmaking web application with a focus on UX clarity and compatibility filtering; the platform contributed to a 15% uplift in successful user connections through improved discovery flows.

Pink Palace – Event Management Platform · JavaScript · CSS · PHP Backend

- Developed a full-featured venue and event-rental portal for weddings and photography, integrating an inquiry and booking workflow that drove a 40% increase in customer enquiries and a measurable rise in direct email leads.

IT Helpdesk Knowledge Base & Ticketing Workflow · WordPress · Python Scripting · Documentation

- Designed and deployed an internal knowledge base and lightweight incident-tracking workflow for an SME client, documenting 50+ resolution procedures and reducing repeat helpdesk tickets by an estimated 35%.

Infrastructure Monitoring Dashboard · Python · Analytics APIs · Linux

- Built a lightweight server and network health monitoring dashboard that aggregated uptime, CPU/memory, and response-time metrics, enabling proactive escalation and supporting SRE-aligned reliability practices.

EDUCATION

Bachelor of Science in Information Technology

Sep 2022 – Apr 2026

KCA University, Ruaraka Campus — Nairobi, Kenya

Relevant coursework: Web Development · Object-Oriented Design · Data Structures & Algorithms · Information Systems Design & Development · Computer Networks

CERTIFICATIONS & PROFESSIONAL DEVELOPMENT

✓ Cisco Certified Network Associate (CCNA)	Networking & Infrastructure
✓ Huawei Certified ICT Associate (HCIA) & Professional (HCIP)	ICT Systems & Cloud
✓ Google Associate Android / Web Developer (GADS)	Mobile & Web Development
